

Austin Peay State University Governor's Stadium

Harlan Electric Company, Inc. began work on the Austin Peay State University Governor's Stadium in the fall of 2013. When the renovations are completed, Governor's Stadium will have four levels, with a training room, the majority of the offices, and dressing rooms on the first floor. On the second floor, there will be meeting rooms and an additional weight room. Spectators on levels 3 and 4 will find the amenities of club seating and skyboxes - new features to the stadium. Harlan is working on the underground distribution and electrical work associated with this project for Bell & Associates Construction.
