Saint Thomas Hospitals (Midtown and West)

Harlan Electric Company, Inc. provided electrical work for the K-Tower including new sections added to the existing 4000 Amp normal switchboard. A new 1200 Amp breaker was added in a critical section of the K-Tower. Demolition was also included within the scope of work for the existing exhaust fans on the A, B and C wings for floors two through seven. Harlan completed the replacement of roof units on each wing, the new fire alarm systems from the main fire alarm panel on floor to end of each wing, and power requirements

for new EF at the end of wings. Power requirements were completed for three new ERU's on the rooftop. Two 3" feeders from electrical room on third floor to the penthouse, above seventh floor through existing hospital during normal operating conditions to power new ERU's on roof Penthouse.
